

Pair Folding Gate / Galvanized Steel Store Front.
For all gate configurations, there is a loss in height of about 6" as the gate is expanded. The stack width of a gate is approximately 1" to 2" per foot of travel.

Top Track Storefront Security Gates allow the gate to be hung much like a curtain across any span, so they always remain within the track. This type of track gate is recommended for storefront openings over 20 feet wide and can be used to secure openings spanning several hundred feet.
